

## *Custom Designed Medical Carts*

**At the request of a Major Healthcare System,  
MEC was asked to design a custom cart  
for specific medical equipment.**

The medical cart is made from Andure® and is specifically designed to fit the department's medical equipment as well as meet the needs of the staff. Andure® is a specially blended resin with a titanium alloy, giving the carts the long term durability the hospital was looking for. MEC System's medical carts are perfect for applications where infection prevention, chemical resistance, durability, impact resistance and custom design are not only important, but critical.

MEC System's design using Andure® gives the carts the ability to withstand continuous cleaning/disinfecting without the risk of chipping, delaminating, rusting or corroding. An integral handle is cut into the Andure®, eliminating the need for handles that trap bacteria, dirt or mold. The carts are designed with fasteners on the underside of the shelves, enhancing the efficiency of cleaning and disinfecting. Industrial grade swivel casters are used for maneuverability.

**MEC CARTS ARE BUILT TO LAST A LIFETIME**
